Christa Sedlatschek
Executive Director

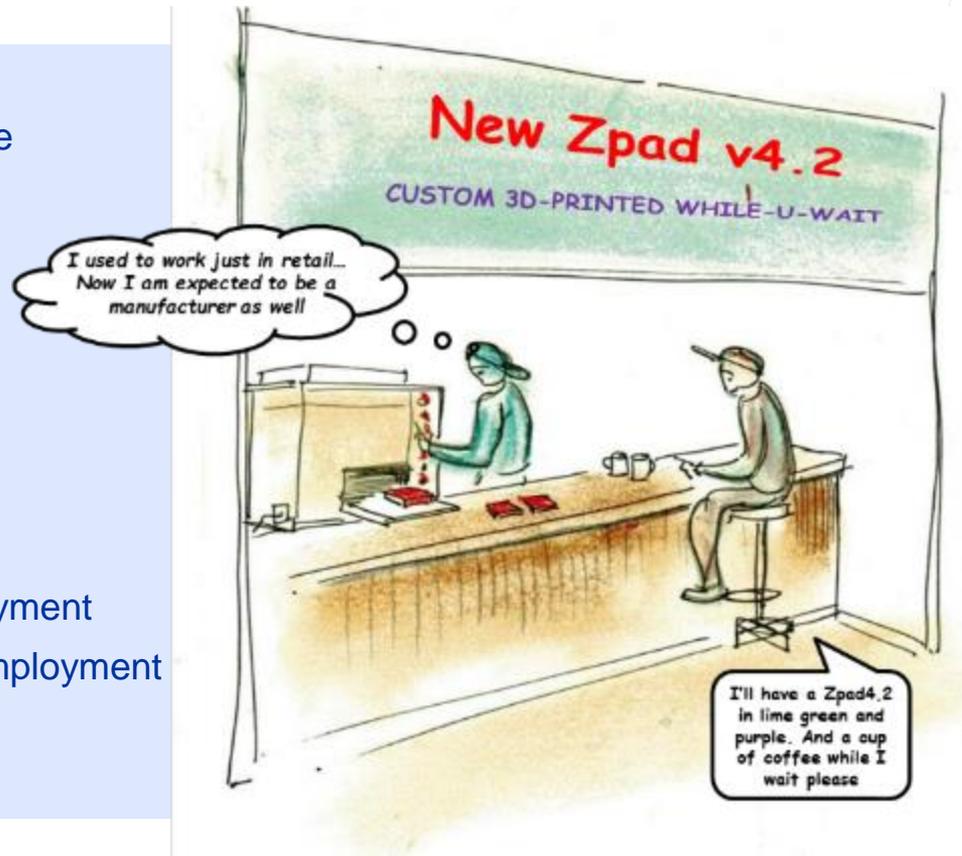

Seminar on New and Emerging Risks related to OSH

Ljubljana Slovenia
19 September 2019

What is shaping the future? Key trends and drivers of change

- Ageing population and workforce
- Increasing migration into and within Europe
- Economic environment
- Greater globalisation
- The European Digital Single Market
- Alternative supply chains and distribution
- Micro and small enterprises
- Data-enabled economy
- Growing employment in the service sector
- New business models and forms of employment
- More part-time, fixed-term or temporary employment

Societal drivers - some evidence from ESENER-2

16%

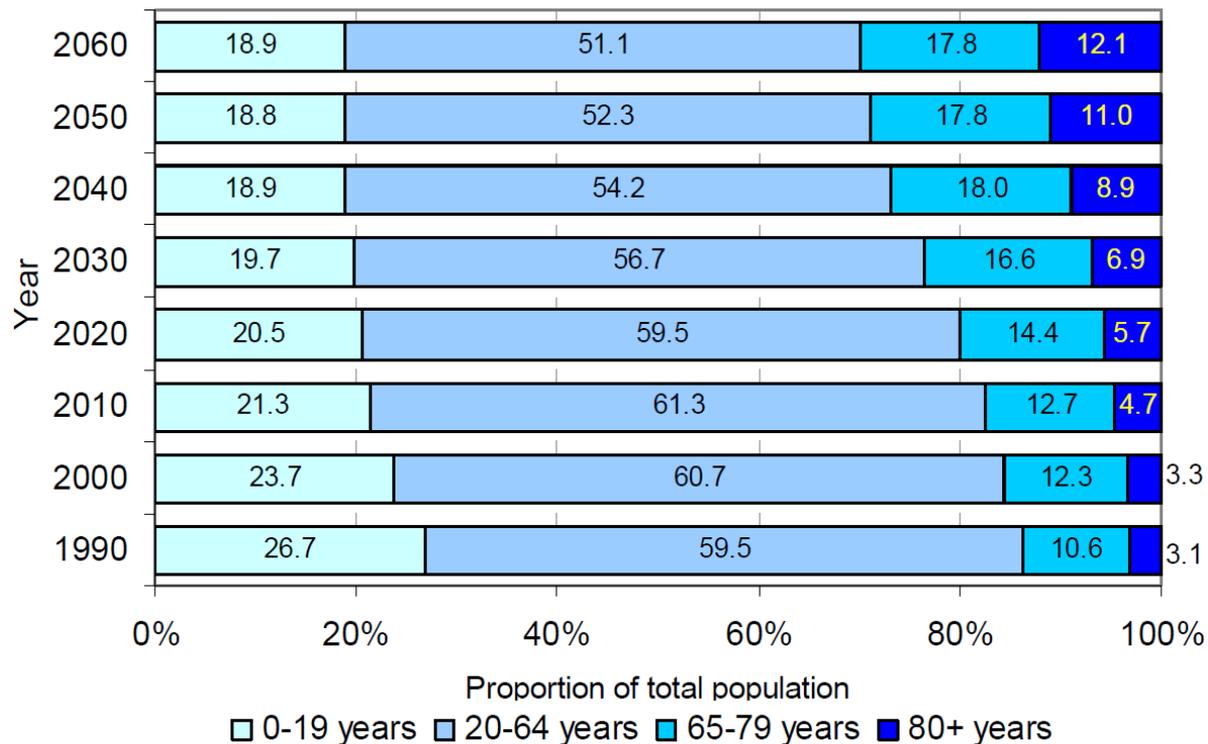

Workplaces in Malta reporting workers that have difficulties understanding the language spoken at the premises (EU-28: 6%)

26%

Workplaces in the Netherlands with workers working from home regularly (EU-28:13%)

Fewer young and more older workers

Digitalisation as a driver of change

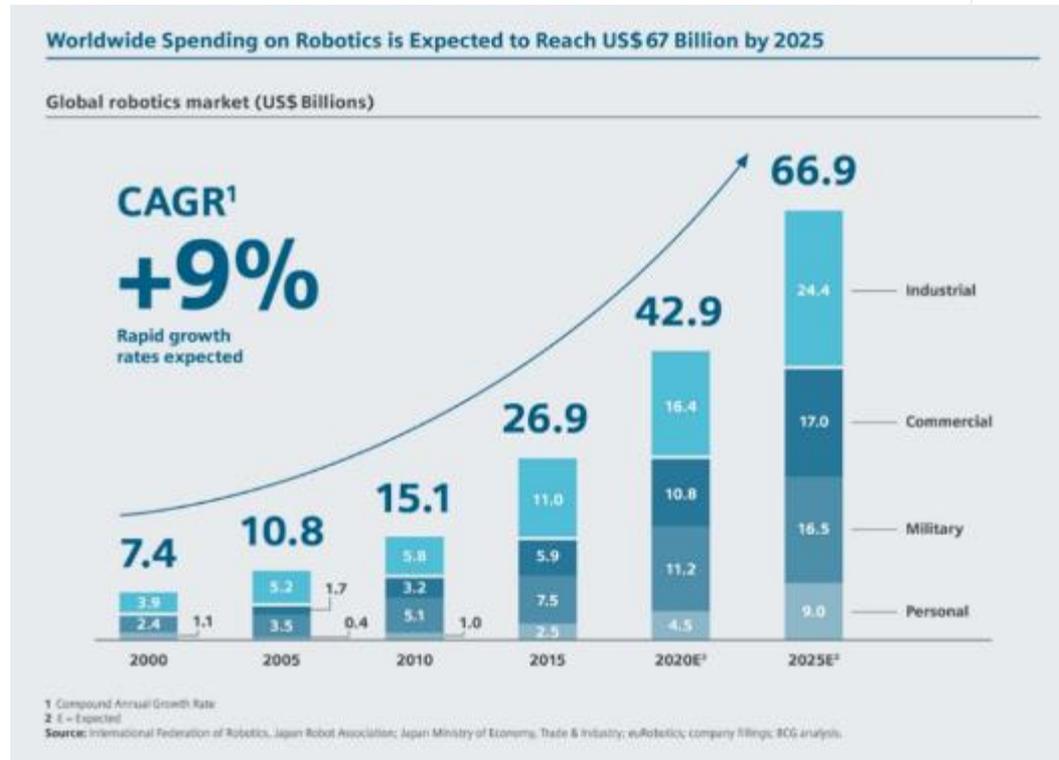

▪ Digitalisation influences

- what jobs there are
- what tasks humans will do
- sectors and industries people will work in
- how people perceive work

▪ New occupations and industries:

- eBay, Facebook, You-tube barely existed 10 years ago, now global corporations
- Since the PC invention, over 1,500 new job titles in occupational classifications (e.g. Data-base Administrator, Web Designer, Cyber-security)
- 65% of children entering primary school will end up working in new jobs that don't yet exist

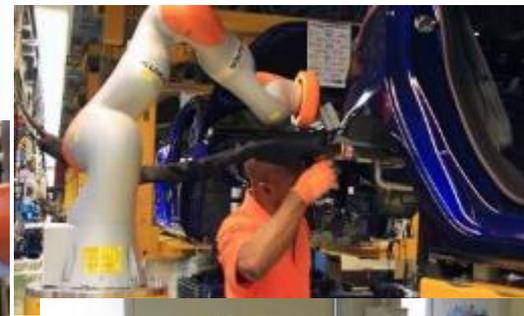

(Research from the World Economic Forum)

(J P Morgan Chase & Co.)

Technology - What is changing?

- Advanced, collaborative robotics
 - Artificial Intelligence
 - Communication networks and mobile devices
 - Wearables, miniaturisation and bionics
 - Virtual and Augmented Reality
 - Autonomous vehicles and drones
 - Internet of “all things and people”
 - Big Data
- 
- Robots becoming “uncaged”
 - Smart and autonomous systems
 - Variety of tasks digitalised and automated
 - In ALL sectors

Technologies are diffusing more widely & much faster than in the past

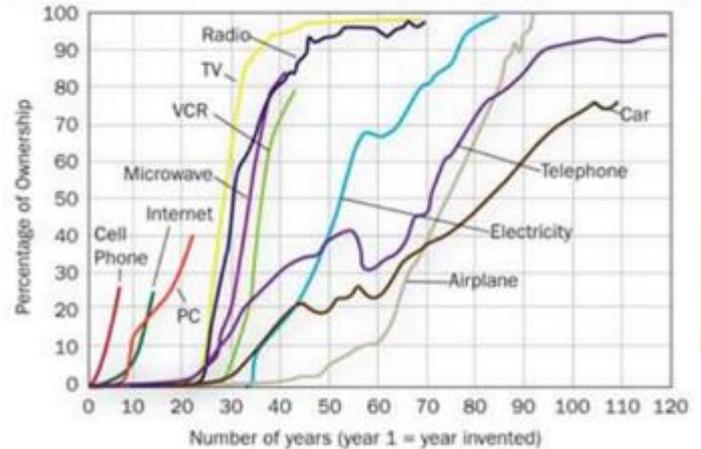

- 119 years for the spindle to spread beyond Europe
- Time taken to reach 50 m users

• Telephone	75 y
• Radio	38 y
• TV	13 y
• Internet	4 y
• Facebook	3.5 y
• Angry Birds app	35 days

Source: Citi Digital Strategy Team

- The volume of global data is doubling every 18 months.
- Global internet traffic in 2016: 1×10^{21} bytes / Compared to text in all books written: 1×10^{14} (Cisco)
- IoT market estimated growth of 20% per year
- A typical family home could have 500 'smart' devices by 2022 (Gartner)
- 500 billion devices will be connected by 2030, from 13 billion in 2013 (Cisco)

Technology Adoption

EU-OSHA's project on New forms of work and OSH

- **Foresight “New and emerging OSH risks associated with digitalisation by 2025”**
 - Reports, summary and cartoons available
- **“Protecting Workers in the Online Platform Economy: An overview of regulatory and policy developments in the EU”**
 - Report and summary, and seminar summary available
- **Expert discussion papers on “The future of work” to stimulate debate**
- **Dissemination workshops**
 - 2018: SI, NO + 2019: RO, ES & coming-up in BG, LT, PL, SI

All available at EU-OSHA website:

<https://osha.europa.eu/en/emerging-risks/developments-ict-and-digitalisation-work>

Expert discussion papers on “The future of work”

- **Crowdwork** - Prof. Huws, University of Hertfordshire, UK (2015)
- **Robotics** - Dr. Adj.Prof. Kaivooja, University of Turku, FI (2015)
- **Additive manufacturing** - Junte, Journalist, NL (2017)
- **Monitoring of workers** - van den Broek, Utrecht University, NL (2017)
- **The future of the (e-)retail sector** - Carter, HSL, UK (2018)
- **Performance-enhancing drugs** - Prof Bloomfield & Dale, Lancaster University, UK, (2018)
- **Management by Artificial Intelligence** - Dr. Moore, Leicester University, UK (2019)
- **Big Data for inspection efficiency** - Dr Dahl, SINTEF Technology and Society, NO (2019)
- **Social innovation in the context of digitalisation** - Saunders, Copenhagen Institute for Future Studies, DK (2019)
- **Exoskeleton** - Dr. Wischniewski, BAuA, DE (2019)

Opportunities for OSH

- Robotics removes workers from hazardous jobs
 - maintenance, logistics etc.
- Improves quality of work - automating monotonous/repetitive tasks
- Human-enhancement technologies - exoskeletons
- Access to work for a diverse workforce
- New opportunities for work-life balance
- Monitoring and improving workers' safety and health condition
- Opportunities for OSH training and communication
- Targeted prevention, inspection efficiency and compliance

OSH challenges – Safety

■ Proximity of the robots to the workers

- Collisions with the robots
- Risks from the equipment used by the robots
- Accidents expected to increase in the short-term

■ Increasing technological complexity

- Too much trust in the infallibility of technology
- Lack of understanding of the underlying processes

■ Unforeseen situations and uses

- Possible to foresee ALL situations at the design stage?
- Incidents outside normal operations e.g. maintenance
- Workers' acceptance and sabotage

■ Cyber-security and functional safety

Human brains are not so easy to hack..

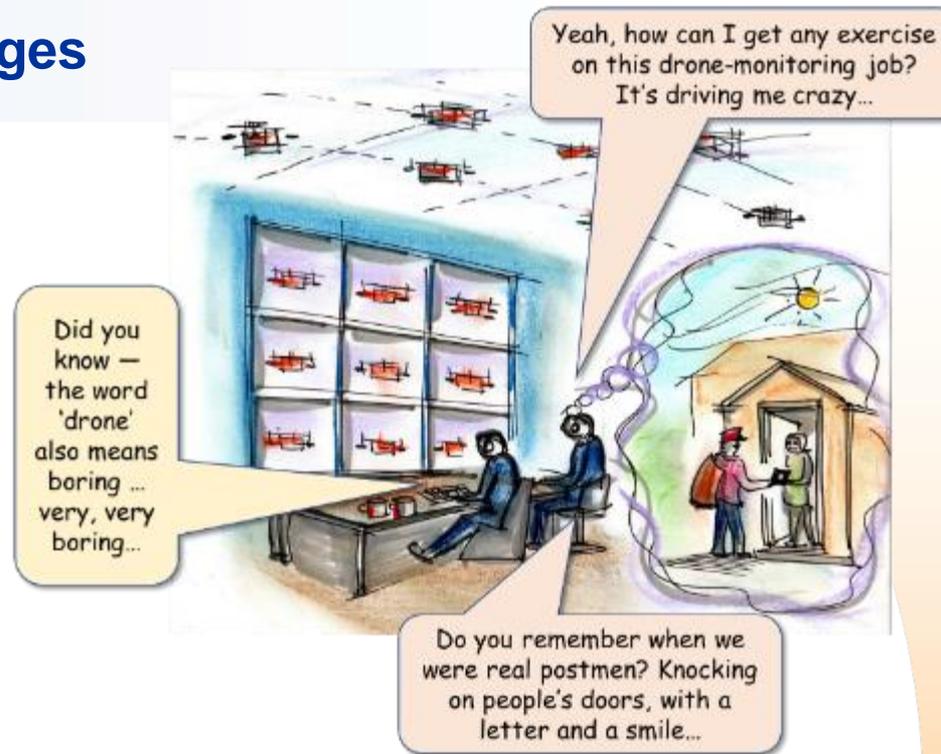

If you want to have some fun, the smart lamp-posts are easy targets!!

Ergonomics and cognitive challenges

- **Human-Machine Interfaces**
 - Driven by technical feasibility and market, not by users' needs
 - Overloading certain body parts?
 - Gesture, voice, eye tracking control is more immediate - safety-critical commands?
- **“Sitting is the new smoking”**
- **Overload ...**
 - Cognitive overload due to increasing technological complexity
 - Work / risk intensification
- **vs Underload as reliability on technologies increases**
 - Monotonous work, narrowed job content, de-skilling of work
 - Loss of workers' skills, errors, accidents
- **Polarisation towards skills / “hollowing out”**

Organisational and psychosocial challenges

- **When your peers are robots**
 - Virtualisation of relationships, loss of social support
 - Loss of motivation and poorer job satisfaction
- **Permanent monitoring of workers**
- **Pressure to perform – at the same level as robots?**
- **Lack of transparency of decisions and loss of job control**
- **Blurring of boundaries work/private life**
- **Ethics and the human-robot team**
 - Who does what, the robot or the worker?
 - Can/will a worker take instructions from a robot-boss?

EU-OSHA's overview of regulatory and policy developments in the Online Platform Economy in the EU

Four broad types of platform used in provision of labour:

1. Non-manual high-skill online workers (e.g. Upwork or PeoplePerHour)
2. Non-manual low-skill online workers (e.g. Clickworker or Amazon Mechanical Turk)
3. Manual driving or delivery workers working offline but managed online (e.g. Uber, Deliveroo, or Lyft)
4. Manual service/maintenance/construction workers working offline but managed online (e.g. Taskrabbit, Helping or Myhammer)

MyHammer
Gute Arbeit. Guter Preis.

upwork™

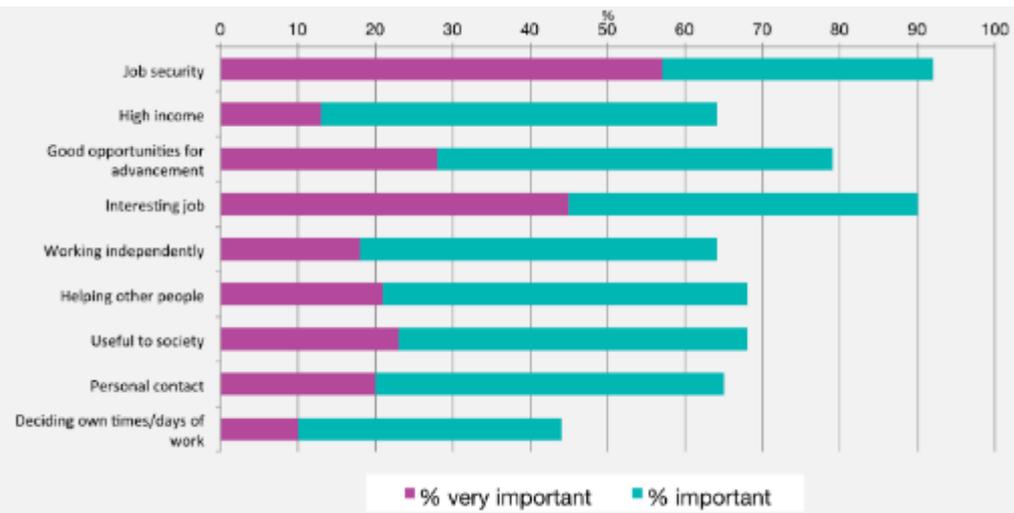

Online platforms: Potential benefits?

Flexibility

- Possibility to combine work/life demands
- Supplementary income
- No fixed location
- Easier access to employment

However...

Perceived importance of different job attributes (*British Social Attitudes Survey No.33*)

- **Hyper-mobile labour**
 - Multiple, simultaneous jobs
- **Job insecurity**
 - Most are actively seeking more regular types of work
 - 92% rate job security as 'very important' or 'important' in a job

Potential OSH effects of online platform work

- **OSH risks associated with the work activities themselves**
 - Risk of injury, exposure to dangerous substances, ergonomic risks, etc. (particularly in certain types of jobs, e.g. cleaning, transport, construction);
- **Psychosocial risks associated with online work:**
 - Work intensity resulting from continuous real-time evaluation and rating of worker performance
 - Pressure to be friendly, efficient and serviceable at all times
 - Lack of support and risk of isolation
 - Harassment and violence from clients
 - Highly precarious employment
- **Additional risk factors: poor access to OSH services**
 - Poor access to OSH services- training, occupational healthcare and surveillance, labour inspection
 - Less likely to be covered by collective preventive measures
 - General employment law guarantees may not apply

To what extent does/should employment law, including OSH, apply?

- **In most jurisdictions, OSH regulation where an ‘employment relationship’ exists**
 - Reality of the relationship, subordination/control, nature of work, remuneration?
- **Challenges associated with online platforms**
 - dynamics
 - strategies
 - atypical features
- **Currently, mostly decided in a reactive, case-by-case manner by judiciaries**
- **A variety of regulatory and policy approaches:**
 - Stepping up enforcement of existing rules
 - Application of ‘employment’ to online platform work
 - New category of ‘independent worker’ or a presumption of employment
 - Providing specific protection for online platform workers
 - >> France proactive with adoption of specific law providing some basic protection for online platform workers

A challenge to stay abreast of this fast-changing area!

Conclusions – How to help mitigate the OSH challenges?

- **Research and innovation fostering the quality of work**
 - Collaboration between academics, industry, social partners and governments
 - More focus on the human aspects and impact on mental health
- **Need for adapted prevention strategies**
 - User-centred Prevention-through-design approach
 - Training for all actors – incl. OSH training for designers
 - Workers' involvement in the deployment of digital technologies and strategies
 - Risk profiles and Risk Assessment – and opportunities!
- **Can inspectorates make more use of data?**
 - Big data to support targeting inspections & information flows to influence compliance
- **Ensuring workers' rights in the digital world of work**
 - Access to OSH services, incl. training, health surveillance, worker's representation
 - Ensuring workers' and their representatives' access to information
 - Protecting workers' right to privacy
- **Regulation to set a level playing field and guarantee minimum rights at EU and national level**
 - Establish an ethical framework
 - Clarify OSH liabilities and responsibilities

What next at EU-OSHA?

- **2020-2022: Larger OSH overview “Digitalisation and OSH”**
 - Procurement in autumn 2019
- **Potential scope:**
 - Automation of tasks, job designs and OSH (collaborative robotics; e-health, etc.)
 - Monitoring and use of data
 - New forms of management (AI, algorithms, gamification, etc.)
 - Online platform economy:
 - Update of EU-OSHA’s regulatory and policy developments
 - Cooperation with Joint Research Centre and Eurofound (COLLEEM survey)
 - Case studies: OSH practices for new forms of work in the digital world
 - Using ESENER 3: 1st data related to digitalisation end 2019
- **2023-2024/25: EU Healthy Workplaces Campaign on Digitalisation and OSH**

Emerging risks
**Anticipating change:
foresight projects**

Work and workplaces are constantly changing. This may give rise to new risks and challenges to workers' safety and health, which must be anticipated and addressed. Through its foresight projects, EU-OSHA aims to anticipate changes — technological, societal, political and economic — that may result in the emergence of new occupational safety and health (OSH) challenges. The objective is to support timely prevention of future OSH risks, thus ensuring that tomorrow's workplaces are safe and healthy.
